

Synergy Compact

Synergy Compact, available in Pro and Ultra formats, provides a powerful and flexible solution that combines viewing, recording, and management of video and alarms with a secure and robust hardware platform.

The on-board Synergy 3 command and control software provides users with intuitive access to fundamental operational tools such as camera controls, video playback and incident management, all displayed in a user-friendly layout. With a touch-screen graphical interface and mapping engine, camera selection is as simple as pointing to a map of the facility. Video playback controls with time, date and clip length selection, make footage review a simple and efficient process.

Suitable for local deployment, where on-site management is required, and as part of a distributed system connected to an over-arching command and control center, this flexible device is ideal for branch networks, vessels, offshore platforms, remote site facilities and any other large-scale federated site applications requiring multi-site management from a central location.

Available with up to 32¹ IP video channels, and storage options ranging from 3 – 10.5TB, Synergy Compact can be tailored to meet the site requirements. Units can be stacked to support up to 128 cameras on a single site, giving the option to grow the system as requirements change. To get the system up and running quickly, installation wizards and set-up screens simplify and expedite the installation process with auto-discovery of connected devices and pre-configured default users, sequences and alarm responses.

Synergy Compact supports over 25 manufacturers' IP camera and encoder ranges, including Synectics, AXIS, Sony, Bosch, Canon and JVC with no additional license fees, and ONVIF

support. The Synergy Compact Pro also includes an integrated 300watt PoE switch² to enable direct connection of IP cameras removing the need for additional network equipment and local camera power supplies and reducing, complexity and cost.

The Synergy Compact Ultra offers enterprise class RAID 5 redundancy, and the on-board Synergy 3 platform can be upgraded to enable integrations to third party systems.³

For secure evidential management, USB storages devices can be utilized for evidence removal with Synergy Compact. Upon insertion of an

appropriate USB storage device⁴, Synergy Compact will automatically configure the drive to be a permanent evidential data store.

The powerful incident management provides a copy of the incident information including watermarking for complete chain of evidence. Additional media format exports are also available.

Fully integrated with Synergy 3 command and control platform, Synergy Compact can be utilized with existing Synergy installations.

Features

- Ability to stack units allows the system to grow with your needs.
- 25+ camera manufacturers supported including ONVIF standards.

- Detailed incident and evidence management system including SHA-2 watermarking to ensure the integrity of evidence.
- Automatic health features

¹ Synergy Compact Ultra

² IEEE 802.3at

³ Additional integration driver costs may apply. Please see your Account Manager for details of the available third-party integrations.

⁴ Additional configuration software required for USB devices, please see your Account Manager.
