**About Synectic Systems, Inc.**

Synectic Systems, Inc. (Synectics), a wholly owned subsidiary of UK-based Quadnetics Group Plc, is an engineering, integration and manufacturing company with expertise in IT and networked systems, CCTV control systems, enterprise DVR and command control software applications. Quadnetics is listed on the Alternative Investment Market (AIM) of the London Stock Exchange.

Synectics' unparalleled ability to deploy custom digital surveillance solutions that integrate with existing legacy systems and future technologies has established them as a market leader in the Middle East, the UK, Europe and North America.

## Innovative Integrations Continue to Power Synergy™

**February 2008 – Synectic Systems, Inc.'s** award-winning command and control CCTV software, Synergy™, continues to expand its industry-leading CCTV product offerings and integration partners. In Q4 2007, Synectics was among the first key players in the highly competitive gaming surveillance industry to announce the release of h.264 encoding for superior image quality/resolution at a bottom line savings of 30% in necessary storage space over MPEG2, MPEG4, MJPEG, Wavelet and other less efficient technologies. Synectics' new 8-channel and single-channel encoders set a new standard for video quality, are available for immediate delivery, and are fully compatible with Synergy.

Also in Q4 2007, Synectics announced its availability and first successful installation of SynergyPro integration to the Maxpro™ analogue matrix. Synergy seamlessly uses MaxPro™ outputs to failover Synectics' DVRs, controls cameras on the monitor wall with its unique touch screen map-based GUI, and supports telemetry and macros from a standard Synectics keyboard and/or NavigatorPro. Now, legacy MaxPro™ (in addition to Pelco™, American Dynamic™ and others) users can upgrade to Synectics' popular gaming surveillance solution with feature-rich analogue-to-digital integration.

Synectics has started out the year with an exciting new integration partnership with software intelligence leader, Object Video, of Reston, VA. With over 800,000 licensed modules worldwide, Object Video is the recognized leader in digital analytics monitoring everything from intrusion, object left behind, scene change, etc. As an Object Video "Global Onboard Partner", Synectics will be embedding and integrating a variety of tailored behavior detection modules into Synergy and its new h.264 encoding products. In February 2008, the first release of "Synergy People Counting", based on Object Video's new Event Counting Suite will be available to Synectics users and resellers. From within the standard Synergy review environment, operators will be able to see live or recorded counts of people entering and/or exiting a facility, walking down particular aisle ways, driving into a garage, or standing in a line to analyze staffing requirements, marketing effectiveness, machine popularity, etc.

## Innovative Integrations Continue to Power Synergy (continued)

---

Finally, with its February release, Synergy integration to best-of-breed Aristocrat's Oasis™ represents the first of several slot and player tracking system interfaces planned for 2008. By mirroring Oasis' slot data in Synergy and time synchronizing critical slot events with Synectics video, operators are notified immediately of high value jackpots or door tampering alarms and presented with live video. Auditors can quickly and efficiently review recorded video based on slot machine, jackpot amount, door open alarms or player; all within the standard, user friendly, highly intuitive Synergy GUI.

Synergy adds exponential value to standard recorded video by intelligently linking alarms and events from the other key third party systems like those described above that typically operate in enterprise environments like casinos, city centers, government facilities, and so on. By directing surveillance operators' attention to the video data that matters most, Synergy-powered surveillance solutions deliver true command and control results.
