

## Third Party Integrations

This document details the existing and “under development” interfaces for Synectics Synergy Pro Operator Interface. The list is by no means all-inclusive and should be reviewed regularly.

Please be advised that “integration” can be widely defined based on the needs and expectations of each user. Therefore, no level of functionality or operation should be assumed based on the inclusion of a manufacture’s name on this list. Furthermore, some interfaces require additional third party equipment, software, and/or configuration to enable functional integration.

In most cases, these are not supplied by Synectics. When specific functionality is required, please confirm feature availability with Synectics and your integrator prior to committing to this or any integrated multi-party system.
